

Radioactive Materials Decommissioning & Phase I Environmental Site Assessments

Vacating a building? OSI can help.

It can take months to get your facility released, which may result in unnecessary lease costs or loss of production. OSI can help minimize these costs.

OSI's turn key services include:

- Decommissioning & Decontaminating the site and preparing the entire radioactive materials license closeout amendment per MARSSIM and NUREG 1507 using OSI's established information systems.
- Perform a Phase I Environmental Site Assessment, per ASTM E 1527-00.

OSI will provide health physics staff who have completed over forty building closeouts in the last two years to survey your licensed space and analyze the radioactive samples in our own licensed laboratory.

We can also:

- Decontaminate Biosafety Cabinets, Freezers, and Incubators
- Inspect and Videotape Exhaust Ducts/Sewer Lines
- Clean Fumehoods & Chemical Storage Cabinets
- Test and Analyze for Residual Chemical Contamination
