

INDOOR AIR QUALITY & MOLD INVESTIGATIONS

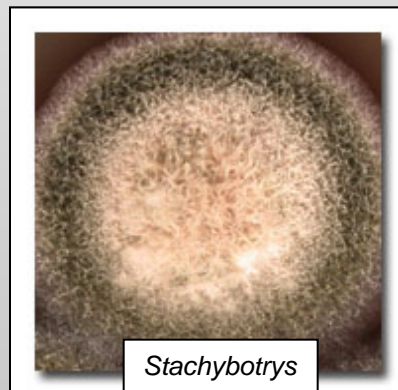

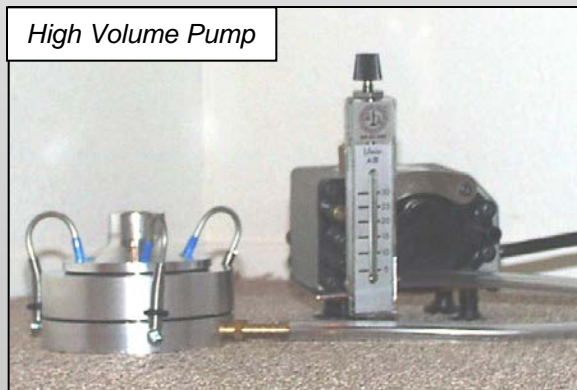

Indoor Air Quality (IAQ) investigations are designed to identify and correct air quality problems.

The acquisition of a property is a major investment and an IAQ survey can protect both the buyer and the seller. This is especially important for occupants with asthma, allergies or other sensitivities.

Occupational Services Inc. ("OSI") provides:

- Assessment of the site for potential moisture problems, mold spore levels, formaldehyde, chemical contaminants, dust, CO, CO₂, temperature, relative humidity, odor, the condition of the HVAC system, etc.
- Reports of the investigations along with conclusions and recommendations to resolve the identified problem or contaminant source.

Occupational Services, Inc. ("OSI") provides mold inspection services by certified inspectors and laboratories using the analytical methods of the American Industrial Hygiene Association.
